

## Engineering Fixes & Feature Checklist

### 1. Rebranding & Global Changes

- [ ] **Rename Platform:** Update all instances of **"Eko Excel"** to **"Eko Learn"** across the entire application.
- [ ] **AI Tutor Rebrand:** Rename the **"Ekoexcel AI tutor"** to **"Oluko"** inside the student portal.

### 2. Login Page Adjustments

- [ ] **Remove District/Ministry Specifics:** Remove individual phone numbers and the names of specific district/ministry officers from the login page (the account represents the entire office, not a single individual).
- [ ] **Update Teacher Placeholder:** Change the default placeholder teacher name from an Igbo name to a **Yoruba name**.
- [ ] **Update Head Teacher/Principal Persona:** - Change the label **"Head Teacher"** to **"Principal"**.
  - Change the default placeholder name to a **Yoruba name**.
- [ ] **Student Login ID Visibility:** Ensure the Student ID field/information is explicitly visible on the student login screen.

### 3. Student Portal Updates

- [ ] **Profile Header Update:** Display the **Student ID** directly alongside and underneath the student's name in the portal layout.
- [ ] **Academic History Feature:** Build a new UI section where students can view their complete academic history tracking back from **JSS1** up to their current class.

### 4. Assignment & Homework Module (Student Portal)

- [ ] **"Add Homework" Button:** Add a **plus icon (+)** for adding homework within the homework section.
- [ ] **Dual-Submission Workflow:**

- **Handwritten Flow:** When the plus icon is clicked, trigger a screen that allows students to **snap a picture of their paper assignment** using their device camera.
- **Computer-Based Flow:** Separate this from the standard computer-based testing/assignments set directly by the teacher.

### **Implementation Note for the Team**

**Priority Suggestion:** The rebranding ("Eko Learn" / "Oluko") and the login page cleanup are high-impact visibility fixes that should likely be bundled into the first sprint, while the camera/snapping feature for handwritten assignments will require native device permission handling or WebRTC setup for the camera UI.
